

## NAVIS-EX

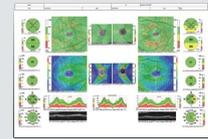

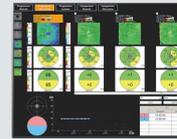

NAVIS-EX is an image filing software, which networks the RS-3000 Advance / Lite and other NIDEK diagnostic devices. This functionality enhances the capability of the diagnostic device with additional features and increases clinical efficiency.

- Analysis and report
- Normative database
- Long axial length normative database (optional software)
- DICOM connectivity

## The OCT for general screening

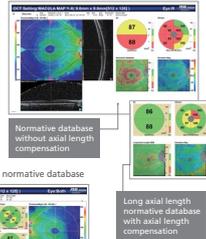

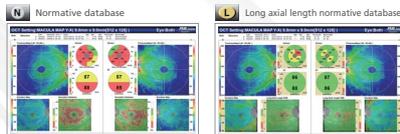

Providing the high resolution OCT images and clinically useful analyses, the RS-3000 Lite achieves the optimum balance between cost and performance with its fundus surface imaging system. The RS-3000 Lite has been developed for screening in general eye clinics.

## Long Axial Length Normative Database

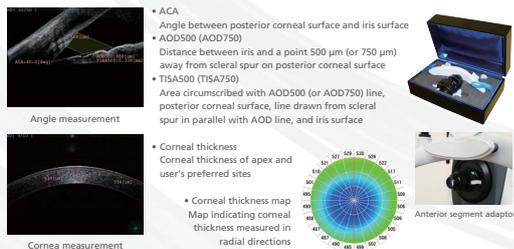

The long axial length normative database is optional software for use with the RS series designed to assist clinicians in diagnosing macular diseases and glaucoma. This normative database was developed based on data from normal eyes (free of ocular pathology) with long axial length. Data were collected from Asian cases by measuring the macular area in 3-D to obtain retinal thickness values, such as full retinal and (NFL+GCL+IPL) thickness, which is important for the diagnosis of macular diseases and glaucoma.

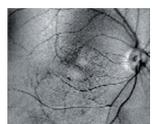

### Sample analysis of a patient with long axial length

## Anterior Segment Analysis

The optional anterior segment module enables observation and analyses of the anterior segment.
